

WHAT IS CLAIMED IS:

1. An ornament for an exterior shutter made of any suitable plastics, woods, metals or the like, and further having an inner face, an outer face, and side edges adjacent the inner and outer face, the inner face and outer face further having at least portions of at least planar surface thereof, comprising:

at least one decorative element consisting of at least a portion of suitable material,

the at least portion of material having at least a predetermined shape and/or at least a portion of decorative surface thereof, an inner face, and an outer face, and a structural size which is substantially smaller in relation as compared to the height and width dimensions of the exterior shutter,

means for at least removably attaching at least a portion of at least planar surface which may be on, or about the inner face of the ornament to at least a portion of at least planar surface, which may be on, or about the outer face of the exterior shutter.

2. The ornament of claim 1, wherein the means for removably attaching at least a portion of at least planar surface, which may be on, or about the inner face of the ornament to at least a portion of at least planar surface which may be on or about the outer face of the exterior shutter is selected from the group consisting of pressure sensitive adhesives, adhesive tapes, strips, or pads, hook and loop fasteners, static cling, water-washable tacky elastomer, adhesive tabs, aerosol adhesives, suction cups or similar like

suction cup devices, clamp like members or devices, male and female connectors, snaps, pins and pegs, clasps, brackets, channels, bars and grooves, or friction fit devices.

3. The ornament of claim 1, further capable of receiving at least one ornament which may be removably attached to at least a portion of at least planar surface which may be on, or about the outer face thereof.

4. The ornament of claim 1, further capable of receiving at least two ornaments which may be removably attached individually and/or in a layered fashion to at least a portion of at least planar surface which may be on, or about the outer face thereof.

5. The ornament of claim 1, further capable of receiving three or more ornaments which may be removably attached individually and/or in a layered fashion to at least a portion of at least planar surface which may be on, or about the outer face thereof.

6. The ornament of claim 1, wherein the ornament is flexible.

7. The ornament of claim 1, wherein the ornament is rigid.

8. The ornament of claim 1, wherein the ornament has a length and width.

9. The ornament of claim 1, wherein the ornament has a length, width, and depth.

10. The ornament of claim 3, having at least one ornament removably attached to at least a portion of at least planar surface which may be on, or about the outer face thereof, further having means for permanently attaching at least a portion of at least planar surface which may be on, or about the inner face thereof to at least a portion of at least planar surface which may be on, or about the outer face of the exterior shutter, wherein at

the point of permanent attachment, the ornament of claim 3 is converted to an ornamental base mount, whereby a permanent ornamental base is presented on the shutter further having all the amenities that are afforded the ornament from which the ornamental base mount was converted.

11. The ornament of claim 10, wherein the means for permanently attaching at least a portion of at least planar surface which may be on, or about the inner face of the ornamental base mount to at least a portion of at least planar surface which may be on, or about the outer face of the exterior shutter is selected from the group consisting of permanent adhesives, glues, epoxies, cements, staples, screws or similar like fasteners, male connectors, male and female connectors, nails, rivets, wires, ties, hot melts, lamination, heating, stitching or sewing, soldering, welding, bonding, or machine industry processes.

12. The ornament of claim 1, and further comprising a plurality of ornaments which may be removably attached in a predetermined grouping on, or about at least a portion of at least planer surface which may be at least on the outer face of the exterior shutter, each ornament within the grouping is positioned in a close proximity in relation to the other ornaments within the grouping, wherein all of the ornament's at least predetermined shapes and/or at least portions of decorative surface thereof further cooperate collectively as a group to present a single display or decorative ensemble.

13. The ornament of claim 12, further having means for permanently attaching at least a portion of at least planar surface which may be on, or about the inner face of the

decorative ensemble to at least a portion of at least planar surface which may be on, or about the outer face of the exterior shutter, wherein at the point of permanent attachment, the decorative ensemble is further converted to a permanent surface treatment for the exterior shutter.

14. The ornament of claim 13, wherein the means for permanently attaching at least a portion of at least planar surface which may be on, or about the inner face of the decorative ensemble to at least a portion of at least planar surface which may be on, or about the outer face of the exterior shutter is selected from the group consisting of permanent adhesives, glues, epoxies, cements, staples, screws or similar like fasteners, male connectors, male and female connectors, nails, rivets, wires, ties, hot melts, lamination, heating, stitching or sewing, soldering, welding, bonding, or machine industry processes.

15. The ornament of claim 1, further comprising photo-luminescent like qualities.

16. As an article of manufacture, at least one set of exterior shutters made from any suitable plastics, woods, metals, or the like that are further manufactured, packaged, and shipped to a distributor or consumer having a plurality of at least ornaments which are still further at least removably attached to at least portions of at least planar surface which may be on, or about the outer face of the at exterior shutters comprising:

Inventor: Thomas

at least one set of exterior shutters, each exterior shutter within the set having an inner face, an outer face, and side edges adjacent the inner face and outer face, the inner face and outer face further having at least portions of at least planar surface thereof,

means for attaching the at least one set of exterior shutters to the exterior of a house adjacent to at least one window,

a plurality of at least ornaments having selected decorations which collectively represent at least one theme, the ornaments each further having at least a predetermined shape and/or at least a portion of decorative surface thereof, an inner face, and an outer face, and a structural size which is substantially smaller in relation as compared to the height and width dimensions of the exterior shutter,

means for at least removably attaching at least a portions of at least planar surface which may be on, or about the inner face of the at least ornaments to at least portions of at least planar surface which may be on, or about the outer face of the exterior shutters in a manor which does not substantially alter the process of manufacturing, packaging, or shipping the set, or sets of exterior shutters to the distributor or consumer,

whereby affording the consumer a unique decorating alternative, wherein the consumer may choose from a wide selection of pre-decorated, theme oriented sets of exterior shutters when opting to improve and/or change the appearance of their house, the consumer may further dispose the at least one set of exterior shutters on the exterior of their house adjacent to at least one window, wherein the at least one set of exterior shutters in combination with the ornaments having selected decorations which collectively represent a

theme, further cooperate collectively to present an instant changeable display system upon the exterior of the house that may be easily changed as desired.

17. The article of manufacture of claim 16, further comprising a plurality of ornamental base mounts which may be permanently attached to at least portions of at least planar surface which may be on, or about the outer face of the exterior shutters.

18. The article of manufacture of claim 16, further comprising a plurality of decorative ensembles which may be removably attached to at least portions of at least planar surface which may be on, or about the outer face of the exterior shutters.

19. The article of manufacture of claim 18, further comprising a plurality of decorative ensembles which may be permanently attached to at least portions of at least planar surface which may be on, or about the outer face of the exterior shutters to further present a permanent surface treatment for the exterior shutters.

20. The article of manufacture of claim 19, further comprising a plurality of ornaments in combination with a plurality of decorative ensembles which may each be permanently attached to at least portions of at least planar surface which may be on, or about the outer face of the exterior shutters to present a permanent surface treatment for the exterior shutters.

21. The article of manufacture of claim 16, further comprising at least 4 ornaments, which may each be permanently attached to at least a portion of at least planar surface, which may be on, or about the outer face of the exterior shutters comprising the at least one set to present a permanent surface treatment for the exterior shutters, wherein one

ornament having a selected decoration is permanently attached to one of the shutters, at least a second ornament having a different selected decoration is permanently attached to the same exterior shutter wherein the selected decorations are related to a theme, at least two ornaments having the same selected decorations are permanently attached to the other exterior shutter to present a permanent display system related to the theme.

22. A method of providing a changeable decorative appearance for a window having exterior window shutters made of any suitable plastics, woods, metals, or the like adjacent thereto comprising the steps of:

providing a plurality of removable ornaments having selected decorations which collectively represent a theme, each ornament further having at least a predetermined shape and/or at least a portion of decorative surface thereof, an inner face and an outer face, and a structural size which is substantially smaller in relation as compared to the height and width dimensions of the exterior shutter,

attaching at least a portion of at least planar surface which may be on, or about the inner face of one ornament having a selected decoration to at least a portion of at least planar surface which may be on, or about the outer face of one of the exterior shutters,

attaching at least a portion of at least planar surface which may be on, or about the inner face of at least a second ornament having a different selected decoration to at least a portion of at least planar surface which may be on, or about the outer face of the same exterior shutter, wherein the selected decorations are directed to a theme,

repeating the attaching of ornaments having at least the same at least two selected decorations on at least a portion of at least planar surface which may be on the outer face of the other exterior shutter to present a display system related to the theme,

removing the ornaments at a substantially later date or as desired to change the presented decorative theme for the window and/or the home.
